

Data Sheet

Float valve
Type **SV 4**, **SV 5** and **SV 6**

Liquid level regulators in refrigeration, freezing
and air conditioning systems

SV 4, SV 5 and SV 6 are for use on the low pressure side as modulating liquid level regulators in refrigeration, freezing and air conditioning systems with ammonia and other common types of refrigerants.

Features:

- Reliable function
- Stable regulation, even during momentary load change
- Liquid injection into the float housing or directly into the evaporator through external pipe connection
- Orifice assembly and filter can be replaced without evacuating the float housing
- Can be supplied without float housing for direct installation in the system (special order only)
- Can be used as pilot float for PMLF if mounted with special orifice (diameter $\varnothing 2.5$ mm)
- Classification: DNV, CRN, BV, EAC etc. To get an updated list of certification on the products please contact your local Danfoss Sales Company.

Applications

The liquid expands into the float housing

Direct liquid injection into the float housing. 4 pcs. M6 screws (pos. 28) are removed, and pos. 26 remains blanked off, see [Figure 2](#). This leaves four holes through which liquid expands directly.

NOTE:

If the capacity is too high, only remove two or three screws. Pos. 28, see [Figure 2](#).

The liquid expands into the float housing

4 pcs. M6 screws (pos. 28) are removed, and pos. 26 remains blanked off, see [Figure 2](#). This leaves four holes through which liquid expands directly.

NOTE:

If the capacity is too high, only remove two or three screws. Pos. 28, see [Figure 2](#).

The liquid expands into the evaporator

Used in large evaporators with long pipe lines. Pos. 26 is removed and weld connection is mounted. Pos. 28 remains screwed. See [Figure 2](#).

NOTE:

Pos. 26 and 28, see [Figure 2](#).

The liquid expands directly into the surge drum

4 pcs. M6 screws (pos. 28) are removed, and pos. 26 remains blanked off, see [Figure 2](#). This leaves four holes through which liquid expands directly.

NOTE:

If the capacity is too high, only remove two or three screws. Pos. 28, see [Figure 2](#).

Media

Refrigerants

Applicable to HCFC, HFC and R717 (Ammonia). Use with flammable hydrocarbons cannot be recommended; please contact Danfoss.

New refrigerants

Danfoss products are continually evaluated for use with new refrigerants depending on market requirements.

When a refrigerant is approved for use by Danfoss, it is added to the relevant portfolio, and the R number of the refrigerant (e.g. R513A) will be added to the technical data of the code number. Therefore, products for specific refrigerants are best checked at store.danfoss.com/en/, or by contacting your local Danfoss representative.

Product specification

Pressure and temperature data

Table 1: Pressure and temperature data

| Description | Values |
|--|--|
| P band | Approx. 35 mm |
| Max. working pressure | MWP = 28 bar |
| Max. Δp | SV 4 = 23 bar SV 5 = 21 bar SV 6 = 19 bar |
| Media temperature | -50 °C to 120 °C |
| Max. test pressure | MTP = 32 bar |
| kv value and diameter for orifice | SV 4: $k_v = 0.23 \text{ m}^3/\text{h D} = 3.0 \text{ mm}$ SV 5: $k_v = 0.31 \text{ m}^3/\text{h D} = 3.5 \text{ mm}$ SV 6: $k_v = 0.43 \text{ m}^3/\text{h D} = 4.0 \text{ mm}$ |

Identification

Figure 1: Identification

Materials

- Gaskets are non asbestos
- Valve housing made of low-temperature cast steel G20Mn5QT
- Float housing: ST 35.8 DIN 17175 W. no. 1.0305

Dimensioning example for SV

Table 2:

| Description | Values |
|--|--|
| Refrigerant | R717 (NH ₃) |
| Evaporating capacity | $Q_e = 145 \text{ kW}$ |
| Evaporating temperature | $t_e = -10 \text{ °C}$ (~ $p_e = 2.9 \text{ bar abs.}$) |
| Condensing temperature | $t_c = +30 \text{ °C}$ (~ $p_c = 11.7 \text{ bar abs.}$) |
| Liquid temperature ahead of SV | $t_l = +20 \text{ °C}$ |
| Subcooling | $\Delta t_{\text{sub}} = t_c - t_l = 30 \text{ °C} - 20 \text{ °C} = 10 \text{ K}$ |
| Pressure drop in SV | $\Delta p = p_c - p_e = 11.7 - 2.9 = 8.8 \text{ bar}$ |
| Correction factor k for 10 K subcooling | = 0.98 |
| Corrected capacity | $145 \times 0.98 = 142 \text{ kW}$ |

NOTE:

At $t_e = -10 \text{ °C}$ and $\Delta p = 8 \text{ bar}$ SV 5 yields 147 kW and can therefore be used.

Capacity

The values in the capacity tables are based on a subcooling of 4 K just ahead of the SV valve. If the subcooling is more or less than 4 K, refer to the following correction factors.

Float valve, Type SV 4, SV 5 and SV 6

Table 3: R717 (NH3)

| Type | Evaporating temperature t_e [°C] | Capacity in kW at pressure drop across valve Δp bar | | | | | | | |

Correction factors

When dimensioning, multiply the evaporating capacity by the correction factor k , dependent on the subcooling Δt_{sub} just ahead of the valve. The corrected capacity can then be found in the capacity table.

Table 5: R717 (NH3)

| Δt K | 2 | 4 | 10 | 15 | 20 | 25 | 30 | 35 | 40 | 45 | 50 |
|--------------|------|---|------|------|------|------|------|------|------|------|------|

SV 4-6 float valves are for low pressure operation only. They are used for flooded evaporators, where only slight variations in the liquid level can be accepted. When the liquid level decreases, the float moves downwards. This opens the orifice (pos. 7) and the amount of liquid injected is increased.

The liquid inlet line should be dimensioned in such a way that acceptable liquid velocities and pressure drops are obtained. This is particularly important when the liquid is only slightly subcooled, since valve capacity is reduced considerably if flashgas occurs in the liquid ahead of the orifice.

The flashgas quantity which occurs on expansion is removed through the balance pipe. On refrigeration plant using fluorinated refrigerants, slight subcooling and a large pressure drop can result in a flashgas quantity of approx. 50% of the injected liquid quantity.

Therefore the pressure drop in this balance pipe must be kept at a minimum, otherwise there is a risk that:

- the liquid level in the evaporator will vary to an unacceptable degree as a function of evaporator load
- the absolute difference between the liquid level of the evaporator and the SV valve

If too large amounts of flash gas are created it is recommended to use the external injection connection or let the liquid expand directly into the surge drum. See application drawings 3 and 4.

See instruction for SV 4-6 for:

- Cleaning of strainer
- Change of orifice
- Change of valve plate

Dimensions and weight

i NOTE:

Weight: 19.6 kg

Float valve, Type SV 4, SV 5 and SV 6

NOTE:

Weight: 9.7 kg

NOTE:

Weight: 3.1 kg

Ordering

Regulator

The code nos. stated apply to float valves types SV 4, 5 and 6 with two 1" weld connections for balance tubes and two ½" weld joints for liquid and evaporator connections respectively.

Table 8: Ordering

| Valve type | Orifice diameter | Code no. | Code no. without housing ⁽¹⁾ | Rated capacity in kW ⁽²⁾ | | | |
|------------|------------------|----------|---|-------------------------------------|------|-------|-------|
| | | | | R717 | R22 | R134a | R404A |
| SV 4 | Ø 3.0 mm | 027B2024 | 027B2014 | 102 | 21 | 16.4 | 15.4 |
| SV 5 | Ø 3.5 mm | 027B2025 | 027B2015 | 138 | 28.6 | 22.3 | 21 |
| SV 6 | Ø 4.0 mm | 027B2026 | 027B2016 | 186 | 38.3 | 29.9 | 28.1 |

⁽¹⁾ Flange for mounting without housing Code no. 027B2027

⁽²⁾ The rated capacity refers to the valve capacity at evaporating temperature $t_e = +5\text{ °C}$, condensing temp. $t_c = +32\text{ °C}$ and liquid temperature $t_l = +28\text{ °C}$

Spare parts and accessories

Smaller orifices for the SV 4 - 6 are available as spare parts and can be mounted in the SV 4 - 6 if smaller capacities are required.

- Seal kit: **027B2070**
- Other spare parts: See spare parts catalogue

Table 9: Special orifice code no. and rated capacities for SV 4 - 6

| Orifice diameter | k_v | Capacities at -10°C evaporating temperature at pressure drop across valve ΔP bar | | | | | | Code no. ⁽¹⁾ |
|------------------|-------|--|------|------|-----|-----|-----|-------------------------|
| | | R717 | | | R22 | | | |
| | | 4 | 7 | 10 | 4 | 7 | 10 | |
| Ø 1.0 mm | 0.026 | 9 | 12 | 13.5 | 1.6 | 2.2 | 2.4 | 027B2080 |
| Ø 1.5 mm | 0.06 | 21 | 27 | 29 | 3.8 | 4.9 | 5.2 | 027B2081 |
| Ø 2.0 mm | 0.1 | 35 | 46 | 50 | 6.3 | 8.3 | 9 | 027B2082 |
| Ø 2.5 mm | 0.16 | 56 | 70 | 81 | 10 | 13 | 15 | 027B2083 |
| Ø 2.8 mm | 0.2 | 70 | 87.5 | 101 | 12 | 16 | 18 | 027B2084 |

⁽¹⁾ The code no. includes orifice and all necessary gaskets

NOTE:

The SV 4 - 6 mounted with special orifice diameter Ø2.5 mm is recommended as pilot float valve for the servo-operated level regulators type PMFL for higher capacities.

Certificates, declarations, and approvals

The list contains all certificates, declarations, and approvals for this product type. Individual code number may have some or all of these approvals, and certain local approvals may not appear on the list.

Some approvals may change over time. You can check the most current status at danfoss.com or contact your local Danfoss representative if you have any questions.

Table 10: Valid approvals

| Type | File name | Document type | Document topic | Approval authority |
|------|--------------|-----------------------------|----------------|--------------------|

Online support

Danfoss offers a wide range of support along with our products, including digital product information, software, mobile apps, and expert guidance. See the possibilities below.

The Danfoss Product Store

The Danfoss Product Store is your one-stop shop for everything product related—no matter where you are in the world or what area of the cooling industry you work in. Get quick access to essential information like product specs, code numbers, technical documentation, certifications, accessories, and more.

Start browsing at store.danfoss.com.

Find technical documentation

Find the technical documentation you need to get your project up and running. Get direct access to our official collection of data sheets, certificates and declarations, manuals and guides, 3D models and drawings, case stories, brochures, and much more.

Start searching now at www.danfoss.com/en/service-and-support/documentation.

Get local information and support

Local Danfoss websites are the main sources for help and information about our company and products. Find product availability, get the latest regional news, or connect with a nearby expert—all in your own language.

Find your local Danfoss website here: www.danfoss.com/en/choose-region.

Danfoss Learning

Danfoss Learning is a free online learning platform. It features courses and materials specifically designed to help engineers, installers, service technicians, and wholesalers better understand the products, applications, industry topics, and trends that will help you do your job better.

Create your Danfoss Learning account for free at www.danfoss.com/en/service-and-support/learning.

Spare Parts

Get access to the Danfoss spare parts and service kit catalog right from your smartphone. The app contains a wide range of components for air conditioning and refrigeration applications, such as valves, strainers, pressure switches, and sensors.

Download the Spare Parts app for free at www.danfoss.com/en/service-and-support/downloads.

Coolselector®2 - find the best components for you HVAC/R system

Coolselector®2 makes it easy for engineers, consultants, and designers to find and order the best components for refrigeration and air conditioning systems. Run calculations based on your operating conditions and then choose the best setup for your system design.

Download Coolselector®2 for free at coolselector.danfoss.com.
